

# Efficient Suprapubic Catheterization

## Supra-Foley® Suprapubic Catheter Introducer and Procedure Kits

The Supra-Foley introducer is designed for easy, controllable suprapubic catheter introduction. Drainage via the suprapubic route is recognized as an effective method of bladder drainage that causes fewer complications compared to urethral catheterization.

The Supra-Foley Suprapubic Catheter Introducer is recognized for controlled abdominal penetration

The Supra-Foley Suprapubic Catheterization (SPC) Kits:

- Available in 18Fr, 16Fr and 14Fr sizes.
- Suprapubic-optimized components provide excellent long-term bladder drainage.
- Unlike many catheters used for SPC, the stepless integrated catheter balloon allows for the smallest possible track dilation, and minimizes the force needed for catheter removal.

### Kit Contents

- Supra-Foley Introducer
- 2-Way All-Silicone Suprapubic Catheter
- Grip-Lok Catheter Securement Device
- #11 Safety Scalpel
- Sterile Field Syringe with 10cc Saline
- Fenestrated Drape
- Iodine Swabs
- 4x4 Gauze

### Order Information

#### Kits

SF-S18-101	Supra-Foley Procedure Kit, 18Fr (red)	5 / box
SF-S16-100	Supra-Foley Procedure Kit, 16Fr (orange)	5 / box
SF-S14-104	Supra-Foley Procedure Kit, 14Fr (green)	5 / box

#### Introducers

SF-S16-851	Supra-Foley Introducer, 16Fr (orange)	10 / box
SF-S12-852	Supra-Foley Introducer, 12Fr (white)	10 / box

#### Catheters

SF-C18	Silicone suprapubic catheter, 18Fr (red)	10 / box
SF-C16	Silicone suprapubic catheter, 16Fr (orange)	10 / box
SF-C14	Silicone suprapubic catheter, 14Fr (green)	10 / box

# Optimal Devices for Bladder Access

The Supra-Foley Introducer is indicated for the following uses:

- Pre-, intra- and post-operative bladder drainage as requested by the physician
- Outflow obstruction
- Chronic retention
- Urethral trauma
- Urethral strictures or fistula
- Neuropathic bladder dysfunction

## Optimized Suprapubic Catheterization Kits featuring the Supra-Foley Introducer

The Supra-Foley introducer simplifies suprapubic catheterization:

- Trocar design provides control and tactility during insertion
- Bladder entry is confirmed with urine flashback
- Integrated trocar/cannula creates a smooth transition that minimizes excoriation of tissue

### The Suprapubic Catheter

Special integrated balloon design creates a smooth surface to facilitate insertion through the smallest possible cannula, and minimizes resistance when explanting the catheter.

All-silicone catheter has an open distal tip that is designed specifically for trouble-free drainage requirements of suprapubic catheterization.

Markings on catheter are calibrated to the Supra-Foley introducer cannula. Relative to the cannula end, the markings indicate 1) tip entry into bladder, and 2) proper insertion depth to commence balloon inflation.

### Sharps Safety

Safety scalpel with retractable blade contributes to your sharps safety program.

### Patient Comfort

Unique Grip-Lok® provides simple and effective catheter securement.
